

## Journal Citation Reports (JCR) 2021

Journal Citation Reports (JCR) es una herramienta incluida en la plataforma Web of Science (WOS) de Clarivate Analytics, que ofrece datos estadísticos cuantificables de citas, entre ellos el Factor de Impacto, que permiten determinar de una manera sistemática y objetiva la importancia relativa de las principales revistas de investigación del mundo dentro de sus categorías temáticas.

## Novedades JCR 2021:

- Nueva interfaz de consulta.
- Incluye el Arts & Humanities Citation Index y el Emerging Sources Citation Index.
- Introduce artículos de acceso anticipado (online first).

*Estas revistas no recibirán FI pero sí una nueva métrica, el JCI (Journal Citation Indicator).*

Acceso a JCR desde nuestra web [biblioteca.uclm.es](http://biblioteca.uclm.es):

Encuentra información ➡ Recursos Electrónicos ➡ [Bases de Datos](#).

Se encuentra en el apartado “Índices de impacto y citas”.

**¡IMPORTANTE!** Es necesario estar conectado a la VPN de la Universidad para acceder desde fuera de la UCLM.

## Journal Impact Factor

The Journal Impact Factor (JIF) is a journal-level metric calculated by dividing the number of citations in a given year by the number of citable items published in the previous two years. The JIF is influenced by citation rates, such as the volume of publication and citations characteristics of the subject area and type of journal. The Journal Impact Factor can complement expert opinion and informed peer review. In the case of academic evaluation for tenure, it is inappropriate to use a journal-level metric as a proxy measure for individual researchers, institutions, or articles. [Learn more](#)

Para cada revista, ofrece el detalle de sus indicadores clave.

### Journal Impact Factor contributing items

[Export](#)

Citable items (80)		Citing Sources (200)	
TITLE		CITATION COUNT	
A science mapping analysis of 'Communication' WoS subject category (1980-2013)	29		▼
Young people learning from digital media outside of school: The informal meets the formal	26		▼
Co-creation and open innovation: Systematic literature review	20		▼
Teen videos on YouTube: Features and digital vulnerabilities	15		▼
Youtubers' social functions and their influence on pre-adolescence	14		▼
YouTube videos and the construction of adolescent identity	13		▼

## Journal Citation Indicator (JCI)

 Export

**3.08**

The Journal Citation Indicator (JCI) is the average Category Normalized Citation Impact (CNCI) of citable items (articles & reviews) published by a journal over a recent three year period. The average JCI in a category is 1. Journals with a JCI of 1.5 have 50% more citation impact than the average in that category. It may be used alongside other metrics to help you evaluate journals. [Learn more](#)

## Total Citations

 Export

**2,018**

The total number of times that a journal has been cited by all journals included in the database in the JCR year. Citations to journals listed in JCR are compiled annually from the JCR years combined database, regardless of which JCR edition lists the journal.

[View all years](#)

## Rank by Journal Impact Factor

Journals within a category are sorted in descending order by Journal Impact Factor (JIF) resulting in the Category Ranking below. A separate rank is shown for each category in which the journal is listed in JCR. Data for the most recent year is presented at the top of the list, with other years shown in reverse chronological order. [Learn more](#)

## Additional metrics

### Eigenfactor Score

0.00275

The Eigenfactor Score is a reflection of the density of the network of citations around the journal using 5 years of cited content as cited by the Current Year. It considers both the number of citations and the source of those citations, so that highly cited sources will influence the network more than less cited sources. The Eigenfactor calculation does not include journal self-citations. [Learn more](#)

### Normalized Eigenfactor

0.57794

The Normalized Eigenfactor Score is the Eigenfactor score normalized, by rescaling the total number of journals in the JCR each year, so that the average journal has a score of 1. Journals can then be compared and influence measured by their score relative to 1. [Learn more](#)

### Article influence score

1.339

The Article Influence Score normalizes the Eigenfactor Score according to the cumulative size of the cited journal across the prior five years. The mean Article Influence Score for each article is 1.00. A score greater than 1.00 indicates that each article in the journal has above-average influence. [Learn more](#)

### 5 Year Impact Factor

5.440

[View Calculation](#)

The 5-year Impact Factor is the average number of times articles from the journal published in the past five years have been cited in the JCR year. It is calculated by dividing the number of citations in the JCR year by the total number of articles published in the five previous years.

### Immediacy Index

1.100

[View Calculation](#)

The Immediacy Index is the count of citations in the current year to the journal that reference content in this same year. Journals that have a consistently high Immediacy Index attract citations rapidly. [Learn more](#)

Además, presenta otras métricas adicionales como el Eigenfactor Score, Article influencer Score, el Índice de Impacto a 5 años y el Índice de Inmediatez.
